**Deployment of the new Batteries Regulation (EU) 2023/1542 within Tadiran Batteries GmbH**

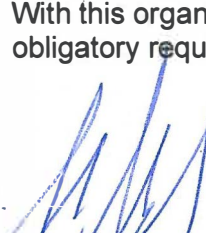

On July 12th, 2023, the European Parliament adopted the above-mentioned Regulation, which will be influencing the EU battery market and beyond, for years to come.

This new framework is gradually replacing the existing EU batteries directive 2006/66/EC. The obligations and requirements vary quite significantly across the five families<sup>1</sup> of batteries created by this Regulation. To comply with these new requirements, Tadiran Batteries GmbH has launched a corporate level project.

The batteries manufactured by Tadiran Batteries GmbH belong to the “industrial batteries” family, representing both rechargeable and primary industrial cells and batteries, with an energy capacity of less than 2 kWh.

The first obligation for Tadiran Batteries GmbH product will concern labeling, CE marking and communication of the EU Declaration of Conformity for those batteries with a due date of 18/08/2024.

CE marking will be visible on all our products, commencing during 2<sup>nd</sup> quarter of 2024. The EU Declaration of Conformity will be accessible directly via a QR code, directing the inquiry to the Tadiran batteries site are made publicly available today. With this organization in place, we can ensure compliance in due time with the several obligatory requirements of the new Batteries Regulation for industrial batteries of < 2kWh.
